Description

PDC Active Hazards Widget can be easily dropped into your ESRI Flex API application. It provides self-contained functionality to display real-time hazard features. These hazard data are issued by authoritative sources and processed by the PDC DisasterAWARE decision support system, used by disaster management professionals worldwide. PDC Active Hazards layers include data from sources such as USGS, NOAA, PTWC, NWS, and JTWC.

Download from the code attachment link below.

IMPORTANT: Please subscribe to our listserv where we announce all mapservice and widget updates that may introduce new features or breaking changes. See the Widget's URL for more information.

Will this widget be available for the 2.4 or 2.5 viewers?

royce   (October 26, 2010)

Thanks David. This is a great addition to the Flex viewer.
